The course provides an overview of the roles, responsibilities, and management methods of the technology project manager. The course assumes no prior knowledge in management techniques and is intended to teach students how to develop approaches and styles of management for software projects. The course assumes a basic understanding of analysis techniques.

- To provide students with a clear understanding of the unique risks, issues, and critical success factors associated with technology projects
- To introduce students to the role and function of project management
- To explain the stages and process of the project life cycle
- To understand the various techniques for planning and managing a technology project
- To examine basic methodologies for software design, development, testing and implementation
- To examine various techniques for managing a software development team
- To understand the need and techniques for managing users and user expectations
- To learn project planning techniques through the use of Microsoft Project Grading
- 35% Midterm test
- 35% Final test
- 30% Homeworks

NOTE for students that cannot take midterm and final tests during the term: these students can choose any exam

session and they must submit homeworks one week before the exam. The exam consists in the midterm and final tests.
Home works

Students are required to work in team (up to 3 people) and to prepare 3 homeworks during the course. To register your project please fill in this form. Please, also write an email to Dario Cerizza (darioocerizza - at - gmail.com) putting [PMSP2014] in the subject to report me that you have just submitted a new project. I will create and share with you a dropbox (<https://www.dropbox.com/>) folder where you will upload the homework assignments. You will receive an email from dropbox as soon as the folder will be available. You should upload your homework assignments in that shared folder.
