

Planning and Managing Software Projects 2010-11 Session $10 - 2^{nd}$ part

Final Exam Preview

Emanuele Della Valle http://emanueledellavalle.org

Credits

This slides are largely based on Prof. John Musser class notes on "Principles of Software Project Management"

- Original slides are available at http://www.projectreference.com/
- Reuse and republish permission was granted

Final Exam Preview

- Format: Similar to last one
 - Open questions
 - An exercise on Earned Value Analysis

Risk Management

- Risk Management
 - Types of risk: schedule, cost, requirements
- Risk Identification
 - Involve the team
- Risk Analysis
 - Risk Exposure (RE = Prob. * Size)
 - Probability is 15%, size is 10 weeks
 - .15 * 10w = 1.5w
- Risk Prioritization
 - 80-20 rule; large size or prob. 1st; grouping; ignoring

Risk Management

- Risk Control
 - Plan
- Risk Resolution (5 Types)
 - Avoidance (ex: scrub)
 - Assumption (just monitor)
 - Control (contingency)
 - Knowledge Acquisition (learn/buy/prototype)
 - Transfer (off project, team, critical path)
- Risk Monitoring
 - Top 10 Risk List (McConnell's example)
 - http://www.construx.com/Page.aspx?hid=1293

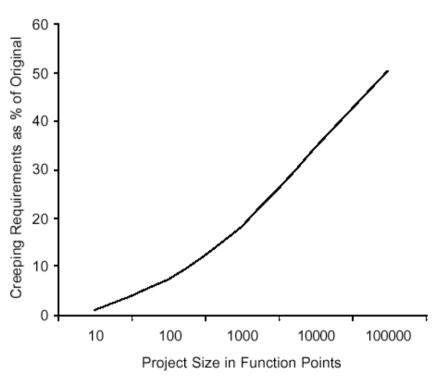

Feature Set Control

- Early phases
 - Minimal Specification
 - Requirements Scrubbing
 - Versioned Development
- Mid of the project
 - **Effective Change Control**
- Final stages
 - Feature Cuts

Final Exam Preview

Change Control - WHY

- Average project has 25% requirements change
- Sources of change
- Change control is a process
- Overly detailed specs. or prolonged requirements phase are not the answer
- Change Control Board (CCB)
 - Structure, process, **triage**

Configuration Control

- Items: code, documents
- Change & Version control
- SCM
- Configuration Management Plan
- Maintenance

Teams

- Start with objective
 - Problem resolution, creativity, tactical execution
- Decentralized vs. Centralized
- Large teams
 - Decompose via hierarchy, into optimal sizes
- Optimal size?
 - 4-6 developers

Team Models

- Business team
 - Technical lead + team; most common
 - Can be strong or loose hierarchy
- Chief-programmer team
 - Surgical team; star at top; ego issues
- Skunkworks team
 - Off-site; pro: buy-in; con: minimal visibility
- SWAT team
 - Highly skilled/specialized; Ex: security team

Team Models vs. Type of Problem

Team Model	Problem Resolution	Creativity	Tactical Execution
Business Team	***	*	**
Chief-Programmer Team		***	**
"Skunkworks" Team		***	
SWAT Team			***

LEGEND

*** Best suited

* Can be used

Resource Allocation

- Responsibility Assignment Matrix
 - Who does What
 - Be able to draw one
- Skills Matrix
 - Who has what skills
 - Be able to draw one

Hiring Guidelines

- Hire for attitude, train for skill
- Smart, gets things done
- Balance

Requirements

- Functional vs. Non-functional (technical)
 - Functional
 - Features
 - Non-functional
 - Reliability
 - Usability
 - Performance
 - Operations: systems management, installation
 - Other: legal, packaging, hardware

Requirements

- Requirements gathering techniques
 - Interviews
 - **Document Analysis**
 - Brainstorming
 - Requirements Workshops
 - Prototyping
 - Use Cases
 - Storyboards

CMM

- Capability Maturity Model
- Five levels
 - Initial
 - Repeatable
 - Defined
 - Managed
 - Optimizing
- Know the functions in each level
 - (especially in the first 2)

QA & Testing

- Testing "Phases"
 - Unit
 - Integration
 - System
 - User Acceptance Testing
- **Testing Types**
 - Black-box
 - White-box
- Integration: 2 types
 - Top down
 - Bottom up

Defect Metrics

- Open Bugs (outstanding defects)
 - Ranked by severity
- Open Rates
 - How many new bugs over a period of time
- Close Rates
 - How many closed over that same period
 - Ex: 10 bugs/day
- Change Rate
 - Number of times the same issue updated
- Fix Failed Counts
 - Fixes that didn't really fix (still open)
 - One measure of "vibration" in project

Earned Value Analysis

- **BCWS**
- **BCWP**
 - Earned value
- ACWP
- Variances
 - CV (BCWP BCWS), SV (BCWP ACWP)
- Ratios
 - SPI (BCWP / BCWS), CPI (BCWP / ACWP)
 - CR (SPI x CPI)
- Benefits
 - Consistency, forecasting, early warning

Migration and Rollout

- Migration Strategies
 - 1. Flash Cut
 - A. Immediate Replacement
 - B. Parallel Operation
 - 2. Staged
 - One part at a time

Migration

- Migration Plan
- Importance of 2-way communication
 - Find-out customer's key dates
- Minimize intrusiveness
- Back-out Plan
- **Data Conversion**

Other Final Steps

- Roll-Out
 - Release Check-List
- Training
 - More than just end-users
 - Users, systems ops, maintenance developers, sales
- Documentation
 - Many types: End-user, sales & marketing, operations, design

Project Recovery

- 3 Approaches
 - 1. Cut the size of the software
 - 2. Increase process productivity
 - 3. Slip the schedule, proceed with damage control
- People Steps
 - Morale; focus; re-assign
- **Process Steps**
 - Fix classic mistakes; mini-milestones
- **Product Steps**
 - Stabilize; trim features; take out the garbage

Post Project Reviews

- Focused on process not people
- Steps
 - Prepare survey form
 - Email team with survey and schedule meeting
 - Gather data
 - Conduct meeting
 - Prepare PPR report

Questions? 25
